x Neurologic deficit subsequent to cardiac surgery remains a cause of postoperative morbidity and mortality. Although myriad risk factors for postoperative cognitive decline have been identified, their individual influence remains undefined.

[Liberal or Restrictive Transfusion after Cardiac Surgery ...](#)

Wed, 11 Mar 2015 20:28:00 GMT

BackgroundWhether a restrictive threshold for hemoglobin level in red-cell transfusions, as compared with a liberal threshold, reduces postoperative morbidity and health care costs after cardiac surgery is uncertain.

Mon, 15 Oct 2007 23:56:00 GMT

Background Antifibrinolytic agents are commonly used during cardiac surgery to minimize bleeding and to reduce exposure to blood products. We sought to determine whether aprotinin was superior to either tranexamic acid or aminocaproic acid in decreasing massive postoperative bleeding and other clinically important consequences.

[Postoperative Arrhythmias after Cardiac Surgery: Incidence ...](#)

Sun, 11 Aug 2013 23:53:00 GMT

Arrhythmias are a known complication after cardiac surgery and represent a major cause of morbidity, increased length of hospital stay, and economic costs. However, little is known about incidence, risk factors, and treatment of early postoperative arrhythmias.
